MANUAL TESTING ANSWERS

1. a) For testing this application, tester should have computer, stable internet connection and tools for testing (such as Jira). My opinion is that we need 5-6 hours for testing.

b) Critical functionalities for this application are valid and successful registration and log in, enable uploading of images, creating and deleting galleries and successful editing and browsing through galleries.

c) For testing, I would probably do several testing types: exploratory, smoke testing, cross browser testing, boundary testing, performance testing, usability and user acceptance testing.

d) Since the application is still in the development, I would do automatic tests for features that have already been completed. Finally, I would probably do a performance testing (to check infrastructure). Also, end-to-end tests and UI tests have to be done.

Bug Report

ID number	#1
Name	Web page on mobile view
Reporter	Jelena Sabo
Submit Date	02/28/2021
Summary	When user opens gallery-app on mobile phone, page is not responsive.
URL	https://gallery-app.vivifyideas.com/
Screenshot	Screenshot is available.
Platform	Windows
Operating System	32-bit Operating System
Browser	Chrome
Severity	High
Assigned to	/
Priority	High

Description
When user opens gallery-app on mobile phone, page is not responsive. Mobile view is not how it should be.

Steps to reproduce
> Enter URL at browser on mobile phone
> Click enter
> Home page is displayed

Expected result
Galleries are at the same place as in the desktop view. Names of the galleries are in the correct place.

Actual result
The galleries are one below the other, the gallery names go out of the box.

Notes
Screenshot is available.
